

STATPRO HOSTED APPLICATION DELIVERY

StatPro's hosted service provides you with access to the entire Analytics platform from any location without the costs, complex implementation and ongoing support burden of locally installed applications.

Backed by internationally recognized information security standards, StatPro's hosted service is a secure means of outsourcing the delivery of StatPro applications and data. Dedicated virtual or physical server implementations mean your data is secure and the environment completely separated from other clients or our secure hosting networks.

Unique secure access tokens are also used for user authentication to ensure your application is only being used by authorized named users from within your organization. 24/7 access from any location in the World or restricted access from single sites and time zones if required. Our security model is certified to ISO27001 and SAS70 so will be very recognizable and familiar to your IT departments.

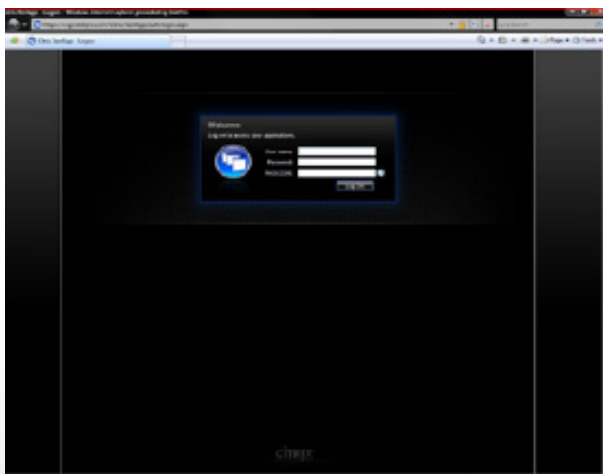

▶ HOSTED DELIVERY HIGHLIGHTS

- **Comprehensive cost savings versus local implementations:**
Implementing and maintaining local applications is an expensive business. Our hosted delivery platform can save as much as 75% on annual maintenance and IT management costs versus local costs. Free your people to focus on your core business and leave the application provisioning and management to the vendor. Get complete transparency on your application costs with no hidden or un-accounted costs.
- **Fast implementation process:**
You can go from contract signature to a production ready system with full application access in less than a week. Our 'go live' process is fully documented and you will be kept informed of progress via your StatPro project manager.
- **Better application and technical support:**
Better application and technical support: With the StatPro application running in one of our data centers, we are able to provide rapid application and technical support without requiring intervention from your local application or IT support teams. Hosted clients benefit from closer support services as we monitor the hosted environment 24/7 with multiple tools. Support staff can react to user issues and can interact with live user sessions if permitted.
- **Failover and recovery choices:**
Our hosted delivery platform gives you the flexibility to choose the recovery model that is right for your business. From nightly system backups with local failover, to intra-day replication with remote site failover and 1 hour recovery, our hosted delivery platform can fit your application recovery and continuity requirements.
